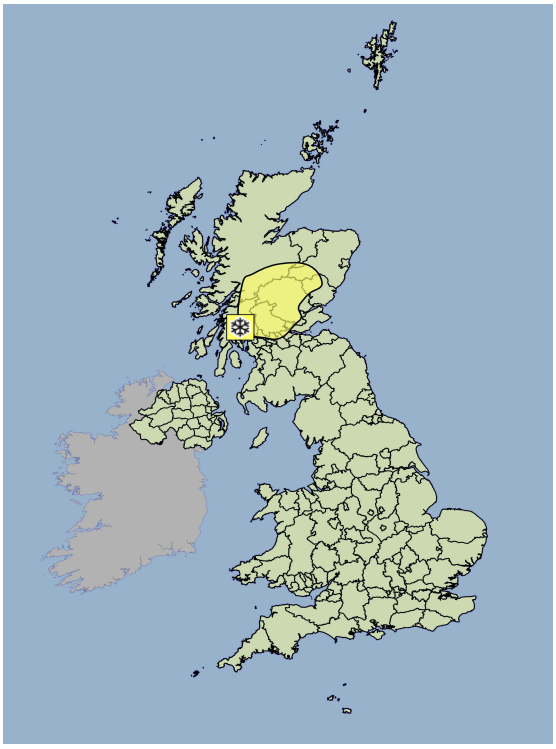
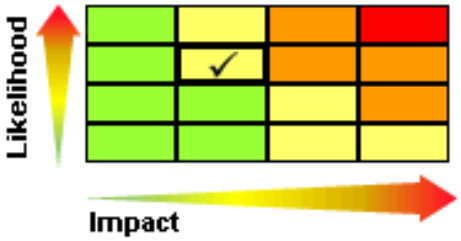
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system will move northeastwards across Scotland on Sunday evening into the early hours of Monday. As the associated band of precipitation encounters cold air across Scotland, snow is likely, possibly giving some accumulations of snow over the higher parts of the Central Belt and more generally across the Grampians. The snow will clear away northwards in the early hours of Monday to be followed by icy stretches on untreated surfaces (see separate yellow warning for ice).

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **18:00 on Sun, 12th Jan 2014** until **03:00 on Mon, 13th Jan 2014**

A band of rain will move northeastwards across Scotland on Sunday evening into the early hours of Monday and is expected to turn to snow as it moves across the southern and central Highlands.

Several centimetres of snow may accumulate on roads above about 250 metres within the warning area and locally 5 to 10 cm on some of the very highest routes.

The rain may also be briefly preceded by some sleet or wet snow to lower levels across the Central Belt too, perhaps giving some slushy deposits on higher routes there.

The public should be aware of possible disruption to travel.
